

LIVE BLOOD ANALYSIS WITH HESTER AT THE METABOLE CLINIC

Continued from page 20

Hester Ladewig

Hester Ladewig is a specialist in dark field microscopy. She was surprised to see bacteria, fungi, viruses and other pathogens disappear from the blood she had identified from patients after they had taken Nature Fresh olive leaf tablets. She examines live blood under a powerful microscope, where even viruses are visible, let alone larger parasites, but they are no match for the olive leaf and the supplements she recommends for all the nasties she finds in your blood, like heavy metal toxicity, nutrient deficiencies, oxygen levels, immunity & much more. Phone her at the **METABOLE CLINIC: 021 930 1081**

All you need after seeing too many horror movies about alien

takeovers is to see your very own live blood under a microscope. Your blood cells share their plasma with a zoo of live bacteria, parasites and viruses within the ebb and flow of your veins, arteries and capillaries. You see your own red blood cells bump up against highly animated colonies and strands of bacteria and pathogens that lurk there, just waiting for a weakness in your immune system or a drop in your blood pH. When breeding conditions such as these are ideal, especially when the blood becomes too acidic and thus deficient in oxygen, they proliferate and symptoms of many familiar diseases begin to develop. If white blood cells cannot be produced in time to keep up the counter attack, an opportunistic colony of pathogens will take over and you will seem to develop a mysterious illness as if out of nowhere. These deadly bugs have an astounding ability to survive against most odds, to breed, multiply and attack you from within. You don't always "catch" a cold. All you need is a weakness in

your immune system and the party begins. Many of us harbour viruses that are now attacking our very own immune systems. Once this happens, we fall prey to any disease that is waiting to set up an overwhelming squatter camp inside you. You can encourage them by overloading on junk foods, pollution and stress and also by not taking care of your daily nutritional requirements in the form of fresh wholesome food, water, supplements & exercise.

A major problem occurs when prescription drugs and antibiotics are unable to destroy the enemy for you. Your alien invaders can also become resistant to medications and antibiotics are ineffective against viruses so there is no point in taking them for a common cold. Thus we have a problem on our hands, with drug resistant TB, malaria, bilharzia,

candida, leaky gut syndromes, ear throat & nose infections and cold and flu viruses constantly gaining the upper hand.

The QX (quantum Xerriod) machine can track down all the alien invaders that may be inside you and it can zap them with an appropriate frequency. The Rife machine and frequency resonator also work on the principle of electronically destroying pathogens, but only the QX machine or the live blood analysis can tell you the who's who of your internal bug zoo. After the zapping, the pathogens will begin breeding all over again unless drastic steps are taken. The electronic frequency is unable to penetrate the contents of the digestive system, where most of the yeast, moulds, bacteria and fungi hang out, so this is where a herbal zapper like olive leaf can penetrate behind the enemy lines. By taking 2 to 4 of the Nature Fresh olive leaf tablets or 5 of the tincture drops every 2 to 4 hours, especially after a good zapping, the disease forming pathogens will be inhibited from subsequent breeding cycles, and your immunity will be strengthened.

CAN CHINESE MEDICINE CURE MALARIA? OLIVE LEAF TABLETS TO THE RESCUE!

My husband and I have just returned from an epic backpacking trek through China, Thailand and Malaysia. With a particular interest in herbal medicine, we had hoped to share some of our research on African herbal remedies with the Chinese doctors. Two weeks after our chill out in the tropics, we found ourselves in the ice and snow: on the roof of China. Jim broke out in a severe fever, with red hot temperatures and chills simultaneously. We were in the middle of nowhere, admiring the wonderful scenery, seven hours up a vertical stone staircase in the mountains. Very few people spoke English. We had already visited many mosquito infested areas in Thailand and Malaysia. Could this be malaria? During the next day, the fever and night

sweats intensified, and my husband became delirious. I grabbed our stash of olive leaf tablets we had been saving to show the Chinese doctors and fed them to him, making him chew a couple every few hours. The next morning his temperature was fine. No aching joints. He continued taking the olive leaf tablets and by the time we visited a big Chinese Herbal Research Hospital in Guilin a few days later, he was his normal bouncy self and there was no need for a doctor's consultation. We were introduced to the resident professor. Doctors come from all over the world to learn about the Chinese remedies at this hospital. For the past 50 years, these formulations have been used to treat chronic diseases. "How about malaria, bacterial, fun-

gal and viral infections, the common cold or even a tooth abscess?" I asked him. He politely shook his head. We described Jim's miraculous turnabout as well as the success rate that South African therapists were having with candida, leaky gut, cancer, TB, AIDS and bladder infections using Nature Fresh olive leaf tablets. When we tried to explain that our wild African

olive leaves were indeed a safe and natural alternative to antibiotics and antiviral drugs as well as a remedy for high blood pressure, poor circulation and sexual dysfunction, the professor smiled nervously and said: "We do not wish to waste any more of your time". We were efficiently ushered down the stairs and out of the building. For more information, please visit our website at: www.nature-fresh.co.za
