

What are parasites and how do we get rid of them?

Parasites are organisms that need a live host for survival. Not all parasites are harmful. Although a five-metre tapeworm is not as dangerous as a microscopic amoeba or a virus, it is still dis-tressing to know that parasites are living, eating, excreting and breeding inside us on a continuous basis. One can attend to the needs of patients suffering from cancer, arthritis, diabetes, endo-metriosis, stomach ulcers, chronic fatigue, de-pression, migraines, heart problems or anaemia far more effectively when the parasites, microbes and pathogens associated with these diseases are first eliminated.

We often resort to alternative therapies, stricter diets and a multitude of supplements to boost our immunity, energy levels and digestion when we feel ill. But parasites have invaded our bodies to such an extent that many so-called diseases are merely symptoms of damage done by: micro-scopic viruses, bacteria, moulds, fungi, protozoa and larger organisms such as flukes and worms in all shapes and sizes. These opportunistic entities along with their eggs, spores, larvae and cysts invade our blood, tissues and organs in diverse and cunning ways. Gut worms and flukes harbour viruses, bacteria, protozoa, etc. that proliferate in direct response to levels of acidity in the body, undigested food, a lack of oxygen, mucous accumulation and energy im-balances caused by stress, pollution and other factors.

With the help of modern diagnostic tools such as the BEST system and QX, today's Complementary Health Practitioners can track down, identify and eliminate parasites. Tests have shown that: over 90% of patients with mental disorders or epilepsy had worm eggs or cysts in their brains. Gut flukes and worms were detected in HIV/AIDS patients and when these were eliminated, they tested as: HIV-negative. Bacteria, viruses and worms also affect certain types of cancer. Even the common cold has a link to worm

Spices like cloves, fennel and cinnamon help to rid the gut of harmful bacteria like shigella and salmonella. Natural parasite remedies include: colloidal silver, bee propolis, garlic, pumpkin seeds, spices and herbs such as artemesia, olive leaf, golden rod, black cumin, etc.

These remedies can be used in combination with electronic treatments such as Rife, QX, zappers and frequency generators very effectively. Symptoms improve and patients recover in direct response to the removal of parasites. Parasites confuse established symptom pictures and make it difficult for patients to get well or respond to surgery, drugs and alternative therapies. It makes sense to first get rid of the parasites and then treat the patient.

ELIMINATE PARASITES WITH:

1 Herbal Parasite Remedy

This tincture can also be applied topically and used for pets.

2 Olive leaf tincture and tablets (vegan)

(also used for Malaria prevention, high blood pressure, to boost immunity and circulation)

3 Bee Propolis tincture

4 Anti-microbial body wash and gel

For nits and head lice, scabies, dandruff, etc.

ORAL HYGIENE PRODUCTS

Non toxic, safe to swallow: fluoride free toothpaste, mouthwash and Breath Buster gel.

INTIMATE HYGIENE

Herbal intimate cleansers & lubricants, pH balanced

HERBAL SKIN & BODY CARE

Body washes, soothing Aloe skin gel, therapy balm, Bee Balm Pain therapy gel

NATURAL HEALTH SUPPLEMENTS

Calcium Complex tablets and powder, MSM & vitamin C pain supplement, Prostate remedy, Herbal hormone balance for woman.
