

NF 047 PROBIOTIC-15 LIQUID - 200ml amber bottle Height 13cm

A liquid concentrate of 15 strains of beneficial bacteria plus selenium. Use to supplement after antibiotics to repopulate gut flora and treat Candidiasis. Take with juice or water. Average dose is 5-15ml per person per day for immune boosting and as a general tonic.

The versatile liquid can be diluted with water and used for gargling, disinfecting wounds, an enema, douche, final hair rinse or for soaking fruit and vegetables and caring for plants and animals. It can be added to drinking water. Its microbial activity doubles when 5ml is added to a glass of water and left to "grow" for a few days. Molasses and yoghurt increases the yield. The original dose will thus expand into 2 or 3 doses!

These liquid probiotic strains survive stomach acid pH and are like seeds that grow in the gut as opposed to a ready-made capsule that may not even dissolve! They are critically needed by the gut, body and the brain. To that we add selenium to make a potent liquid supplement.

It is not only antibiotics that destroy these microbes. We destroy them continuously by using electronic equipment, and wi-fi.
